**LICENSE FOR FOREIGN FILING UNDER  
Title 35, United States Code, Section 184  
Title 37, Code of Federal Regulations, 5.11 & 5.15**

**GRANTED**

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Office of Export Administration, Department of Commerce (15 CFR 370.10 (j)); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

**NOT GRANTED**

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

11. (Original) The method of claim 1, wherein (a) comprised etching the bottoms of recessed features to a depth of about 20 to 100 Angstroms into the underlying metal.

12. (Original) The method of claim 1, wherein (a) comprises etching under conditions producing an etch-to-deposition ratio ranging between about 1 and 1.5 in field regions of the substrate and an etch-to-deposition ratio ranging between about 1.1 and 3 in the bottoms of the recessed features.

13. (Original) The method of claim 1, wherein (a) comprises depositing the first portion of diffusion barrier elsewhere on the substrate to a thickness of between about 10 and 100 Angstroms on field regions of the substrate and sidewalls of the recessed features.

14. (Original) The method of claim 1, wherein (b) comprises depositing the second portion of diffusion barrier to a thickness of at least about 5 Angstroms on the bottoms of the recessed features.

16. (Original) The method of claim 1, wherein (b) comprises using chemical vapor deposition (CVD), physical vapor deposition (PVD), atomic layer deposition (ALD), or pulsed deposition layer (PDL).

17. (Original) The method of claim 1, wherein at least one portion of the diffusion barrier comprises a material selected from the group consisting of tantalum, nitrogen-doped tantalum, tantalum nitride, titanium nitride, tungsten nitride, ruthenium, and silicon containing versions of any of these.

18. (Original) The method of claim 1, wherein (a) comprises sputtering a metal from a target having an applied DC power of between about 1 and 30 kW, while applying a bias to the substrate.

19. (Original) The method of claim 18, wherein the bias comprises RF power of between about 100 and 2000 W.
